

## XCeloSeq® Lung Cancer cfDNA Kit

SEQ010

### Product Description

The XCeloSeq Lung Cancer cfDNA Kit contains two pools of targeted DNA enrichment primers for independent identification of mutations from sense and antisense DNA strands. These primers are designed for use only with XCeloSeq Targeted cfDNA Core Reagents (Part Code: GF020). Together they allow for the generation of high quality, high-complexity next-generation sequencing libraries that are suitable for use with Illumina next-generation sequencing instruments.

### Specifications

Gene Targets	17
Targeting Primers%	300
Recommended Input Quantity*	5-50 ng cfDNA
Recommended Read Number#	4,500,000
Hands on Time	1.5 Hours
Total Protocol Time	5.75 hours

%Targeting primers are split between the sense and antisense DNA strands

\*Higher quantities within this range will improve maximum sensitivity, recommended maximum is 50 ng. The product supports capture with down to 1.0 ng of cfDNA, however this is not recommended as it will lead to reduced sensitivity. Enzymatically fragmented FFPE is also supported as an alternative starting material, when 50 ng should be used.

#Suggested read number for cfDNA samples. Reads should be divided equally between Pool 1 and Pool 2 Libraries. Read numbers can be optimised by users for different uses. For example, for FFPE libraries fewer reads may be sufficient.
